

Summary

Software Engineer with 4 years of experience delivering custom Warehouse Management Systems for clients across the US. Worked directly with clients at every level, from stakeholders to warehouse floor staff, translating requirements into shipped software and supporting deployments on-site.

Experience

LOGISTEED Solutions America (formerly Hitachi Group subsidiary)

May 2022 – April 2026

Software Engineer

- Localized and customized ONEsLOGI, a Java/Tomcat/MySQL cloud-based Warehouse Management System deployed in 800+ warehouses worldwide, adapting the core platform to meet client-specific operational, language, and business requirements.
- Designed and implemented a line-side delivery workflow for Kawasaki's Rail Car manufacturing facility in Lincoln, NE, a 500+ employee operation, enabling hundreds of tracked parts to be delivered to the production line and consumed to produce a single train car.
- Acted as lead engineer for the U.S. warehouse operations of a Japanese eyewear retailer with 800+ stores worldwide, owning all change requests, bug fixes, and client support solo after launch. Bridged communication between the client, 3rd-party warehouse staff, and operations leads to diagnose and resolve time-sensitive warehouse issues.
- Acted as lead engineer for a 24/7 steel wire manufacturer in Hamilton, OH that handles tens of thousands of kilograms of steel daily, taking sole technical ownership months before launch, finalizing implementation details with the client, and successfully launching the WMS.
- Researched and prototyped warehouse automation solutions, developing and presenting proofs-of-concept in Python and Android for RFID-based label scanning to evaluate technical capabilities and drive client adoption.
- Mentored new hires on internal system architecture and development best practices to accelerate onboarding.
- Traveled to client sites across multiple states to support project launches and provide on-site support.

Skills

- Languages: Java, SQL, Typescript, Python, C++
- Frameworks: Java EE, React, Node.js, Flask, FastAPI, Express, Deno, Tailwind CSS, tRPC
- Infrastructure/Tools: AWS (EC2), Tomcat, GitHub, Docker, Jira, Confluence, Linux
- Databases: MySQL, SQLite
- Languages (Spoken): English (Native), Japanese (Business-level)

Projects

AI Voice Chatbot | *Personal Project*

April 2026 – Current

- Engineered embedded firmware in C++ (Arduino IDE) for an M5Stack Atom Voice (ESP32) device to capture microphone audio and stream it over Wi-Fi to a self-hosted FastAPI backend running in Docker on WSL.
- Built a multi-model AI inference pipeline using OpenAI Whisper (STT), Ollama with Qwen3.5 (LLM), and Kokoro-82M (TTS) to process speech and return synthesized audio responses to the device.

Education

University of California, San Diego

September 2017 – June 2021

Bachelor of Science, Computer Engineering
